

2022 Consumer Confidence Report

Consumer Confidence Report (CCR)

GOLDEN WSC groundwater PWS ID Number: TX2500006 903-768-2861

Information about your Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pickup substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also, come from gas stations, urban storm water runoff and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact our office. You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When you water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have you water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

This is your water quality report for January 1 to December 31, 2022.

This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide safe drinking water.

For more information regarding this report contact: Golden Water Supply at (903) 768-2861

Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al teléfono 903-768-2861.

Opportunities for Public Participation

On the 4th Monday of each odd number month, we have our monthly meeting of the Board of Directors. The time of the meeting is 7:00 PM and takes place at our office at 335 county road 2943.

Information about Source Water

Source Water Name	Type of Water	Report Status	Location	County
PLANT 1 / cr 2921	aquifer	active	Carrizo - Wilcox	Wood
PLANT 2 (US 69 N / CR 2373)	aquifer	active	Carrizo - Wilcox	Wood
PLANT 3 (8516 FM 779)	aquifer	active	Carrizo - Wilcox	Wood & Van Zandt
PLANT 5 (FM 1799 S / GOLD)	aquifer	active	Carrizo - Wilcox	Wood
7 - 2791 FM 779	aquifer	active	Carrizo - Wilcox	Wood
8 - 2791 FM 779	aquifer	active	Carrizo - Wilcox	Wood
FM 17 – formerly G2340046B	aquifer	active	Carrizo – Wilcox	Van Zandt
VZ CR 1713 – formerly G2340046A	aquifer	active	Carrizo - Wilcox	Van Zandt

Golden WSC provides groundwater from the Carrizzo-Wilcox aquifer located in Wood and Van Zandt county.

TCEQ completed an assessment of your source water and results indicate that some of your sources are susceptible to certain contaminants. The sampling requirements for your water system is based on this susceptibility and previous sample data. Any detection of these contaminants may be found in this Consumer Confident Report. For more information on source water assessments and protection efforts at our system, contact Scott Reynolds at 903-768-2861.

For more information about your sources of water, please refer to the Source Water Assessment Viewer available at the following URL: http://www.tceq.texas.gov/gis/swaview

Further details about sources and source water assessments are available in Drinking Water Watch at the following URL: http://dww2.tceq.texas.gov/DWW/

2022 Regulated Contaminants Detected Water Quality Test Results

e following tables contain scientific terms and measures, some of which may quire explanation. e concentration of a contaminant which, if exceeded, triggers treatment or other quirements which a water system must follow. gulatory compliance with some MCLs are based on running annual average of onthly samples. Level 1 assessment is a study of the water system to identify potential problems d determine (if possible) why total Coliform bacteria have been found in our atter system. Level 2 assessment is a very detailed study of the water system to identify tential problems and determine (if possible) why an E. Coli MCL violation has curred and/or why total Coliform bacteria have been found in our water system multiple occasions. e highest level of a contaminant that is allowed in drinking water. MCLs are set close to the MCLGs as feasible using the best available treatment technology. e level of a contaminant in drinking water below which there is no known or

close to the MCLGs as feasible using the best available treatment technology. e level of a contaminant in drinking water below which there is no known or					
e level of a contaminant in drinking water below which there is no known or					
pected risk to health. MCLGs allow for a margin of safety.					
e highest level of a disinfectant allowed in drinking water. There is convincing					
evidence that addition of a disinfectant is necessary for control of microbial					
ntaminants.					
e level of a drinking water disinfectant below which there is no known or					
pected risk to health. MRDLGs do not reflect the benefits of the use of					
sinfectants to control microbial contaminants.					
llion fibers per liter (a measure of asbestos)					
illirems per year (a measure of radiation absorbed by the body)					
t applicable					
phelometric turbidity units (a measure of turbidity)					
cocuries per liter (a measure of radioactivity)					
icrograms per liter or parts per billion					
illigrams per liter or parts per million					
rts per quadrillion, or picograms per liter (pg/L)					
rts per trillion, or nanograms per liter(ng/L)					
il it r					

Disinfectant Residual

Disinfectant Residual	Year	Average level	Range of Levels Detected	MRDL	MRDLG	Unit of Measure	Violation	Source in Drinking Water
System #1 Pws:2500006 Chlorine	2022	1.025	0.6 – 2	4	4.0	ppm	No	Water additive used to control microbes.

Regulated Contaminants Detected

Lead and Copper

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90th Percentile	# Sites Over AL	Units	Violation	Likely Source of Contamination
Copper	9-1-2021	1.3	1.3	0.319	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.

Water Quality Test Results

Disinfectants and Disinfection By- Products	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Haloacetic Acids (HAA5)*	2022	3	2.7- 2.7	No goal for the total	60	ppb	N	By-product of drinking water disinfection.
Total Trihalomethanes (TTHM)*	2022	28	27.4 – 28.3	No goal for the total	80	ppb	N	By-product of drinking water disinfection.
Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Barium	12-14-2021	0.086	0.019 - 0.086	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Fluoride	12-14-2021	0.208	0.134 - 0.208	4	4.0	ppm	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.
Nitrate [measured as Nitrogen]	2022	0.0531	0.0 - 0.0531	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contamination
Combined Radium 226/228	12-14-2021	1.5	0 – 1.5	0	5	PCi/L	N	Erosion of natural deposits
Gross alpha excluding radon and uranium	12-14-2021	4.2	0 – 4.2	0	15	pCi/L	N	Erosion of natural deposits
